Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High pressure just west of CA will be the main weather feature for Northern CA today. Sunny, dry and warmer than normal conditions are expected, and N-NE winds will gust to 25 mph or so in the typical areas from the western Cascade-Sierra slopes to the coastal mountains. This pattern will be briefly interrupted early on Thursday as another weak weather system passing to our north spreads clouds over the region, and a few very light showers are possible in far Northern CA.

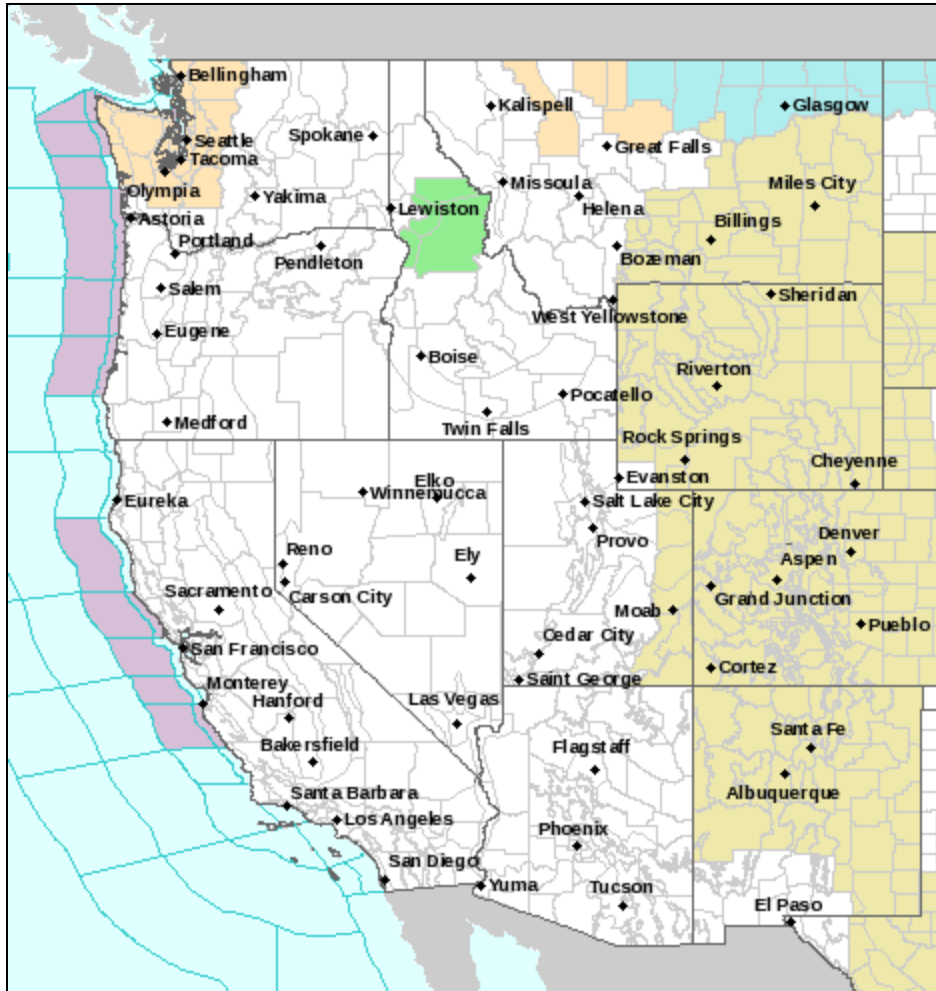

Friday will be similar to today, with sunny, dry and warmer than normal weather and N-NE surface winds gusting to 25 mph or so in the same areas. As the high strengthens over the area this weekend and early next week afternoon temperatures could reach 10-20 degrees above normal with N-NE winds gusting to 25-35 mph in the same wind-prone areas each morning. Computer models are showing this pattern lasting into the middle of February.

SOUTHERN CALIFORNIA

Very warm and dry through early next week

There will be very little change in the weather through early next week as a strong ridge of high pressure sits off the CA Coast. Maximum temperatures will be 10 to 15 degrees above normal, with 60s to low 70s across the mountains and Central Valley and mid 70s to mid 80s in the coastal valleys. Minimum humidity will be mainly in the single digits and teens away from the coast and San Joaquin Valley. There will be local northeast to east winds of 10 to 20 mph with gusts to 35 mph across the mountains and below the canyons and passes of Southern CA Saturday morning. Otherwise, winds will be light.
